

## PI/RtPM Professional Services

**OSIsoft's** PI™, the core of the Real Time Performance Management System (RtPM™), is the leading data acquisition and management technology in the energy generation and delivery industry today. Beyond providing traditional historian functionality, PI provides a platform for attaining real-time intelligence and decision support by integrating vast amounts of isolated operating data across the enterprise and making it available on the desktop.

**Bow Networks** is an OSIsoft Independent Software Vendor and System Integrator focused on the Transmission and Distribution sector of the electric utility industry. Bow is distinguished by our understanding of the operational data requirements across the T&D enterprise, extending from EMS/SCADA to regulatory compliance.

Bow will deliver the following capabilities to your PI/RtPM implementation;

- A thorough understanding of relevant data interfaces for the T&D sector.
- Project management and quality assurance that have delivered projects on time and on budget to many of the industry leading vendors and utilities.
- Off-the-shelf products providing legacy protocol support for field devices and systems.
- Custom interface development if required.
- The family of Bow Networks products for field data aggregation and normalization directly integrated with the PI system through our OPC interface.

### ***Already Own PI?***

You are already familiar with the power of the PI. Let us help you further leverage the system by developing reports, Visual Basic applications, ProcessBook screens and Advanced Calculations. With our experienced engineers and developers we can assist in the integration of isolated operating data, making it relevant across the enterprise through the deployment of the range of OSIsoft products.

### ***Product Expertise***

Bow's experience in the transmission and distribution sector combined with in-depth training in OSIsoft's suite of products delivers superior value for the T&D customer needing to further enhance and integrate their PI installation. Specifically, Bow can offer professional services on the following OSIsoft applications:

- PI Process Book
- PI Datalink
- PI ACE
- PI ActiveView
- PI AlarmView
- PI Performance Equations
- PI ModuleDB
- IT Monitor

Bow Networks delivers solutions and products to enable utility-wide real time acquisition of substation and field data. Since 1986, we have assisted more than 70 utilities worldwide to achieve better asset utilization and superior quality of service levels.
